desk five

electronic visitor management system

NFIVE is proud to present unparalleled performance in this essential software, fundamental to efficient electronic visitor management. It's powerful tracking features and outstanding analysis reports are based on an intuitive and user friendly interface, conscious of receptionists needs.

AUTO TYPING

Learning from experience, DeskFive offers selectable options from the fully stored data.

EASY CHECK-IN / AUTO CHECK OUT

Compatibility with CardScan allows you to scan data from business cards directly into the database by OCR (optical character recognition). Entering a checked in name activates check-out options automatically, drastically reducing operation mistakes.

MULTIPLE TO MULTIPLE

This unique feature permits automatic processing of multiple visitors to multiple staff members through a single effortless operation.

BADGES

The flexibility of the system allows you to assign pre-printed badges, issue them directly at check-in, customize layouts and choose between paper, label or plastic card printers.

ROUTE MAPPING

This feature offers a printed map to their final destination, relieving the receptionist of yet another task.

RESOURCE MANAGEMENT

Resources such as meeting rooms and visual equipment are allocated and controlled instantly. Their existence is memorized at first input and status provided in real-time.

E-MAIL NOTIFICATION

E-mail is automatically sent to the visited staff member.

NETWORK

The system is fully network compatible with database access from multiple stations of your choice. Although the KeyFive enabled license is required for Check-in/Check-out routines, analysis and general operation are allowed from any PC.

REPORTS

DeskFive generates predefined or customized information analysis and reports in real time, while DeskFive records details of every visit. Data such as present visitors and most frequent visitors is available instantly in a clear functional format.

Easy Check / Point view - Easily store information about all visitors.

Visitors View - Allows you to view information about visitors who have checked-in.

History View - Provides records of all visitors and visited staff.

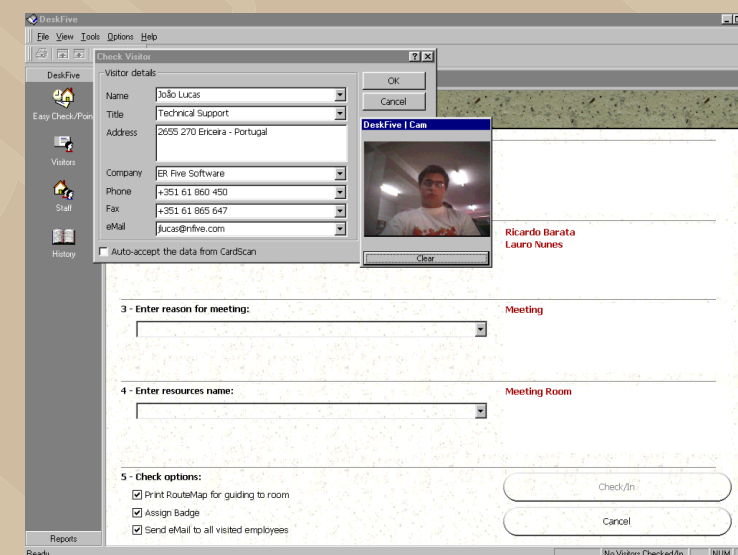

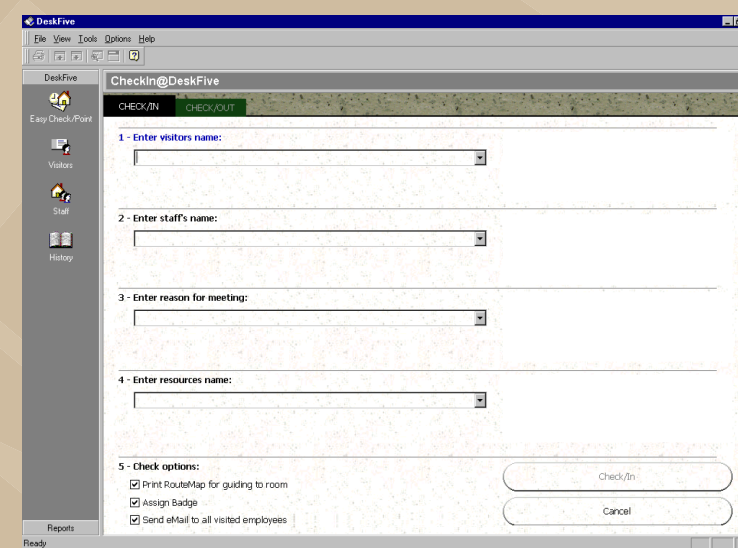

Reports View/Print - Most frequently visited staff members and most frequent visitors

Resources - Controls company logistics

Print Route Map - To guide visitors to meeting location

E-mail Notification - E-mail automatically sent to visited staff member

Multiply To Multiple Visitor management - Allows you to check in multiple visitors for the same staff member/meeting

CardScan

Corex CardScan Integration enables Optical character recognition for instant database input.
